WELCOME TO CELERANT

Simply Powerful Commerce™

WELCOME

Thank you for choosing Celerant. We are excited to have you aboard, and look forward to helping you succeed with the most innovative SaaS retail software on the market!

We understand the decision to purchase a retail system was not easy; you may still be somewhat apprehensive about changing systems. We understand your concerns as we have helped thousands of businesses like yours, across all verticals. We are eager to help you maximize the benefits you receive from your Cumulus Retail system. At Celerant, we pride ourselves in being a mature and reputable company, providing advanced retail software and services for over 30 years.

Cumulus Retail is designed to be easy-to-use and get you up-and-running in a short time-frame. We offer one-on-one, online training; and a Client Site with resources for you to more effectively learn the software and train your team. On the Client Site, you can access an extensive library of short, 'How-To' training videos, along with in-depth, 'Critical Thinking' videos to introduce and explain retail concepts and best practices to help you improve your business.

Now that you purchased Cumulus Retail, you may be wondering, 'What's Next?' Besides this 'Welcome Guide', you should have received an 'On-Boarding Guide' and a 'Hardware/Peripheral Verification' document from your Implementation Manager. These documents are intended to be your guide- so you know what to expect, what to do, and where to go from here.

Again, thank you for choosing Celerant; we look forward to helping you be more successful.

GO-LIVE PROCESS

As we perform your implementation, we work closely with you to ensure a timely and successful implementation that meets your needs. The following are key steps of what to expect as we move forward. Please remember timely responses are critical to keep your implementation on schedule.

SUPPORT & TRAINING

Celerant offers quality customer service and technical support seven days a week. Our Support Team has the knowledge and experience to troubleshoot and find a solution to your situation.

What is Celerant's Retail Software Assurance?

Celerant Assurance promises continuous coverage of more than your initial implementation— it dovetails with regularly-released software updates to ensure neither your system, nor its support, becomes out-of-date. As one of Celerant's key differentiators, its software is continuously updated with the latest and most advanced functionalities, enabling clients to maintain a competitive edge.

How do I request an update?

Simply send your request via email to <u>updates@celerant.com</u>. In the body of the email, please include your company name, full name, current version, and any details related to the version or updated build you are requesting.

Shortly after your email is received, one of our update technicians will send you an update request form to complete and return. Once this form is received and reviewed, an update technician will work with our Quality Assurance Department and identify the version or build that best meets your requirements.

The update technician will contact you to determine a date when your update can be scheduled. You will also be notified shortly before the update is to take place.

Important Notes

Live production system updates will be performed Monday – Wednesday and test system updates are on Thursday – Friday.

As with any version change, we always ask that clients test their own business practices against a new version in a test or non-production environment.

For more information about purchasing a test server, please contact your sales representative.

ONGOING TRAINING

To maximize use of the system, we offer training, an extensive library of short, how-to videos, elaborate 'Critical Thinking' videos explaining retail concepts and best practices, and more. Resources are available via our Client Site. We continuously update the Client Site with new material; and send monthly e-newsletters to clients. One-on-one online training is available at our standard rate (\$95/hour) to help you better understand any part of the system. Our Software Specialists can connect to your system via the internet so you can interact with a shared desktop.
